Closed-form counterexamples, not trained-model results
Prediction slope
FM time
Posterior mean D: slope t/V
Endpoint map F: slope 1/sqrt(V)
Material derivative at input z=1
FM time
Posterior mean D
Endpoint map F
Both appealing constraints can miss the target
Excess supervised risk at t=.5
Invariant F
Wrong-prior D2
Both have mean 0 and variance 1
Derivative at y=0, precision=1
True precision derivative
Covariance-only closure
Symmetric posterior
Skew posterior
