Late clean-head derivative error is mostly symmetric
Mean squared Frobenius error (2 by 2 tangent block)
Symmetric residual
Skew residual
Thin Original ODE
Thin Swi128
Thin Swi192
Thick Original ODE
Thick Swi128
Thick Swi192
A zero-skew constraint targets only a small component
Skew share of the same residual energy (%)
0.031%
0.021%
0.026%
0.195%
1.010%
0.041%
Thin / clean: the late panel at 0.7 is hardest
Tangent derivative residual energy
Original ODE
Swi128
Swi192
External time
The true tangent field sometimes needs local expansion
Fraction of 64 anchors with a positive eigenvalue
Thin
Thick
