Shared-potential ODE: positive secondary evidence does not pass the declared rule
Primary condition fails at both snapshots
P energy retained under tying
Bank A mean
Bank B mean
Selection requires <= 0.50
2.5k
5k
Secondary energy conditions pass
Fraction
P share of blocked energy
Linear share of lost P energy
0.84
0.90
0.86
0.85
Depth-dependent directions transfer locally
Bank A direction alignment with bank B
Common only
Common + linear depth
0.68
0.82
0.57
0.75
Bank-mean gradients are not opposing
Pairwise P-gradient cosine
Visits 1,2
Visits 1,3
Visits 2,3
Dots: eight individual bank-A batches, not independent training repeats. No confidence intervals or significance claim.
